

How to upload a new product

A step-by-step guide for the people who put pieces on the shop.
You do not need to be technical. If a box says “Skip if unsure”,
leave it empty.

1 September 2026

Also inside Admin: Shop → How to upload

Three rules

1. Do **not** click **Publish** until photos, naira price, sizes, and stock numbers are filled in.
2. Click **Save draft** often. If you close the tab without saving, the product is lost.
3. After you publish, open the shop and look at the product the way a customer would.

Before you sit down

Get these ready on your computer or phone:

- The product name (exactly as it should appear, for example “The Avril Gown”).
- At least **2 photos**, ideally 4–6. First photo = front. Second photo = the look that should appear when someone hovers on the shop.
- The naira price for each size (or one price if every size costs the same).
- How many pieces you have of each size (the stock count).
- A short sentence about the piece, plus fabric and care notes if you have them.

iPhone photos: the website does not accept HEIC files. Save or export as JPG or PNG first. On iPhone: Settings → Camera → Formats → Most Compatible. Or AirDrop / share the photo and choose JPG.

Allowed photo types: JPG, JPEG, PNG, or WebP. Each photo must be under 5 MB. Do not upload PDF, Word, GIF, or video here.

Two ways to add a product

EASIER — USE THIS IF YOU CAN

Copy a similar product

1. Open Products and find a piece that is almost the same.
2. Click the name to open it.
3. Click **Duplicate** at the top.
4. Change the name, photos, price, and stock.
5. Save draft, check, then Publish.

Duplicate makes an unpublished copy. Customers cannot see it until you publish.

FROM SCRATCH

Start with a blank form

Use this when there is no similar product to copy. Follow steps 1–8 below.

Step 1 — Log in and open Products

1. Go to the staff login: **prudentgabriel.com/login** (choose Staff).
2. Type the email and password your manager gave you. Click Sign in.
3. In the left menu, open **Shop**, then click **Products**.
4. Click the wine-coloured + **Add product** button at the top right.

Only use staging.prudentgabriel.com if your manager told you to practise there. The live shop is prudentgabriel.com.

Step 2 — Name and description

Product name MUST FILL

Type the name customers should see. Example: *The Avril Gown*. Click outside the box when you are done. The **Slug** fills itself. Leave the slug alone.

Short description SKIP IF UNSURE

One or two sentences. Maximum 200 characters. This is a quick summary, not the full story.

Full description MUST FILL

Write the product story here. Include fabric, lining, and care instructions in this same box (for example: “Dry clean only. Lined. Concealed back zip.”). This text appears on the product page under “Product Details”.

If you also see a box called “Materials & care”, you can leave it. It currently shares the same text as Full description.

Step 3 — Upload photos

Click the dashed box that says **Drop images here or click to upload**. Select your photos. You can select several at once. Wait until it says “Images uploaded”.

Order matters. Upload in this order (or set Primary after):

1. **Photo 1 — Primary (★)** — the main front shot. This is what shoppers see first on the shop and in search.
2. **Photo 2** — a second angle. When someone moves their mouse over the product on the shop, this photo appears.
3. **Photos 3–6** — back, fabric close-up, styling. Nice to have, not required.

To make a photo the main one, click ★ **Set primary** under it. The gold ★ means that photo is the main one.

To delete a photo, click **Remove**. If you remove the primary photo, the next one becomes primary automatically.

You need at least two photos for the hover change to work on the shop. One photo is allowed, but nothing will swap on hover.

Step 4 — Price, sizes, and stock

This is the part that makes the product buyable. Please go slowly.

Starting ₦ for new sizes MUST FILL

Type the naira price, for example *185000* (no commas, no ₦ sign). The form starts at 1000 — that is only a placeholder. Change it.

Base \$ and Base £ SKIP IF UNSURE

Leave these empty. The website will convert from naira. Only fill them if your manager gave you a fixed dollar or pound selling price.

Default kg / L / W / H SKIP IF UNSURE

Parcel weight and size for shipping. Leave blank unless you have measured the packed garment.

Sizes MUST FILL

1. Tick the sizes you sell (XS, S, M, L, XL, XXL). Un-tick sizes you do not have.
2. Click **Generate size rows**. This creates one row per size.
3. Click **Copy ₦... onto every size** if every size is the same price. Then change any size that costs more or less.

4. In each row, fill **Stock** with how many pieces you have of that size. Use 0 if that size is sold out. If stock is 0, customers cannot buy that size.

SKU fills itself (it looks like PA-AVRIL-M). Leave it.

Low at is usually 3. That means you get a low-stock warning when 3 are left. You can leave it.

Need a size that is not in the list (for example 8, 10, 12, or One Size)? Click + **Add size** and type the size name in the Size box.

You must keep at least one size row. Do not delete the last row.

Step 5 — Sale prices (only if it is on sale)

Skip this whole step if the product is not on sale.

1. Tick **Product is on sale**.
2. On each size row, type the sale naira price in the **Sale ₦** column. This must be lower than the regular ₦ price.

If you fill Sale ₦ but forget to tick “Product is on sale”, shoppers still pay the regular price. Both are required.

Step 6 — Colours, Complete the Look, and SEO

Colours SKIP IF UNSURE

Only if the same product comes in more than one colour. Click + **Add colour**, type the colour name (Ivory, Black), and pick the colour square. Leave Image URL empty unless your manager gave you a link.

Complete the Look SKIP IF UNSURE

Optional. Search for up to 4 other published products shoppers might add with this piece (shoes, a wrap, jewellery).

SEO (Meta title and Meta description) SKIP IF UNSURE

Leave empty. Google will use the product name and description.

Step 7 — The right-hand boxes (Status and Organisation)

Category MUST FILL

Choose the closest match: Bridal, Evening Wear, Casual, Formal, Kiddies, or Accessories.

Product type MUST FILL

- **RTW** — ready to wear. The piece is made and in stock. Most shop products are this.
- **Bespoke** — made to order / by commission. Only choose this if that is truly the case.

Tags SKIP IF UNSURE

Optional labels, separated by commas. Example: *bridal, autumn-2026*. If a collection uses an auto-tag, putting that same tag here will add the product to that collection automatically after you publish.

The ticks on the right:

- **Published** — leave this off while you work. Use the Publish button at the top when everything is ready.
- **Featured** — only tick if your manager asked for this piece to be highlighted.
- **New arrival** — tick for new pieces. Shoppers see a “New” badge. Untick later when it is no longer new.
- **Bespoke available** — tick if customers can also commission a made-to-measure version of this RTW piece.

Step 8 — Save draft, check, then Publish

1. Click **Save draft** at the top. You should see “Product created” or “Changes saved”. The page will reopen in Edit mode.
2. Scroll through once more. Check name, photos, each size’s price, and each size’s stock.
3. When it is ready for customers, click the wine **Publish** button.
4. Open a new browser tab and go to the shop. Search for the product name, or open *prudentgabriel.com/shop/* plus the slug shown under the name box.

If something looks wrong, come back to the product, fix it, and click **Save draft** (if you want it hidden) or **Publish** again (to keep it live with the fixes).

To hide a live product without deleting it: open it, untick Published, then click Save draft. Or on the Products list, switch the Published toggle off.

Put it in a collection

Publishing does not automatically put the product in a collection page (for example a named launch). Do this after the product exists:

1. Left menu: **Shop** → **Collections**.
2. Click the collection name.
3. Click **Edit collection**.
4. Under **Also include these products**, type the product name, then click it in the list.
5. Save the collection.

If the collection has an auto-tag, you can instead put that same tag on the product (step 7) and skip the manual search — but the product must be published for auto-tag to pick it up.

Change an existing product

1. Go to Products.
2. Use the search box to find the name.
3. Click the product name.
4. Change what you need. Click Save draft or Publish when finished.

On the Products list you can also:

- Turn Published on or off with the switch.
- Turn Featured or New on or off with the switches.
- Change the naira price inline only if the product has *one* size. If it has several sizes, click the name and edit each size row.

Do not click Delete unless you are sure. Deleted products cannot be brought back. Hide with Unpublish instead.

If something goes wrong

The page says the name or slug is too short / invalid

Name needs at least 2 characters. Slug should be lowercase letters, numbers, and hyphens only — click outside the name box and let it fill itself.

Upload failed / file is too large / only JPEG PNG or WebP

Convert HEIC or GIF to JPG. Make sure the file is under 5 MB. Try one photo at a time.

I cannot click Publish / I see a red note about variants

Every size row needs a size name, a price of at least 1, and a stock number (0 is allowed). Starting ₦ cannot be 0.

The product is live but says sold out

Stock is 0 on every size. Open the product and type the real stock numbers, then save.

The product is not on the shop

It is still a draft. Click Publish. Also check you are looking at prudentgabriel.com, not staging.

Hover does not change the photo

Upload a second photo. The second photo is the hover image.

A photo shows “Hosted on old server”

Open the product (Edit) and click “Re-upload to Cloudinary”. Wait until it finishes.

Sale price is filled but customers still see the old price

Tick “Product is on sale”, then Publish / save again.

Printable checklist

Tick these before you click Publish.

- ☐ Name is spelled correctly
- ☐ Slug was left alone (filled itself)
- ☐ Full description includes fabric and care
- ☐ At least 2 photos uploaded
- ☐ The front shot is marked ★ Primary
- ☐ Starting ₦ is the real price, not 1000
- ☐ Every size you sell has a row
- ☐ Every size has the correct stock number
- ☐ Category and RTW / Bespoke are correct
- ☐ If on sale: tick is on AND Sale ₦ is filled
- ☐ I clicked Save draft first and checked the page
- ☐ After Publish, I opened the shop and looked at it
- ☐ If it belongs in a collection, I added it there

Stuck? Ask your manager before deleting anything.
